

# IP Access Control

## IP Security Solutions from Securicall Systems

SECURICALL bring together years of experience in the Security Solutions market and a full understanding of data networking. SECURICALL has developed a highly effective solutions model and can provide an integrated solution and services suite for the intelligent security management of high-capacity buildings and multi-Campus situations. Intelligence can be seamlessly woven into the way buildings operate, to create intuitive, closely monitored, high security environments. The SECURICALL portfolio of Security Solutions products and services ranges from simple Access Control Systems to sophisticated Integrated Enterprise Systems and their ongoing support.

## Manage Facility Access across Multiple Sites with a Scalable Security Platform

This Enterprise system is a web-based, access control solution that enables organisations of all sizes to secure their facilities, people and assets across multiple offices, buildings or locations from any browser. The access control platform seamlessly integrates with IT and logical security systems to deliver a new standard in performance, scalability and efficiency that can only be achieved through convergence.

The IP Access System's unique, directory-to-directory approach delivers one unified view into physical and logical access control policies, reports, activities, and the addition, editing and deletion of identities via seamless integration of:

- Security Information & Event Management (SIEM) Systems
- Identity Access Management (IAM) Systems
- Video Management Systems (VMS)
- Physical Security & Information Management (PSIM) Systems
- Access Control Systems
- Human Resource Databases
- LDAP Directory Structures

## Key features & benefits

### 100% Browser-based Web Application

Unlike legacy, client/server-based access control systems, this Enterprise system is accessible anytime, anywhere from any standard web browser, including Firefox, Safari or Internet Explorer. Manage employee facility access privileges quickly and easily from any location without being tied to a dedicated client workstation or paying for individual software licenses per user.

### Secure, Linux Operating System

The system is pre-installed with a secure, open-source, Linux operating system (OS), which significantly reduces the risk of virus attacks, frees administrators from installing Windows security patches and on-going anti-virus updates and eliminates the cost of operating system licenses and upgrade fees.

### Peer-to-Peer Directory Synchronization

The system's unique, peer-to-peer directory structure synchronizes HR employee directories to all the network appliances and door controllers in real-time using OpenLDAP, which does not require organizations to maintain separate database servers at each facility or manually update and duplicate employee information on site.

### ONGOING SUPPORT

All Securicall's Access Control systems are fully supported by the company's dedicated engineering and service teams who have extensive experience in both Access and data networking.

### Return on investment

Many companies will already have much of the infrastructure in place to support Access Control, including an IP network, thus avoiding the need to install additional cabling and helping to make **Securicall's** Access a realistic and affordable solution. With a commitment to deliver high-value security solutions, the smart design approach adopted by **Securicall** reduces capital expenditure and ongoing service costs.

### WHY SECURICALL?

SECURICALL is a market leader in the provisioning of Access Control solutions operating over data networks. With unique understanding of both data networking and security systems, SECURICALL delivers elegant, end-to-end fully integrated solutions with guaranteed performance - and quick return on investment.

Based from our regional offices, SECURICALL provides auditing and planning, design and implementation service to organisations across the UK.
