

## **Key features & benefits**

Securicall's Apartment Management System (AMS) is a very low cost method of:

- 1) Alleviating concerns associated with the security, safety and connected services of empty domiciles or buildings in general.
- 2) Providing 24 hour central monitoring of hazards such as fire, smoke, water leakage and intruder/burglary etc., in occupied or unoccupied premises.
- 3) Providing a saleable "added value" item to prospective purchasers.
- 4) Reduces the cost of cabling the building.

## **Introducing : The Securicall Apartment Management System...**

### ***Preventing unnecessary hassle and cost with facilities management***

The Securicall Apartment Management System (AMS) has been designed to help alleviate concerns associated with the security, safety and connected services of empty domiciles or buildings in general. It can provide a highly efficient and cost-effective form of alarmed protection for six or more separate flats or apartments in an accommodation complex.

More than simply an intruder alarm, the AMS will monitor the condition of a range of connected sensors within each of the apartments or buildings.

It is likely that an installation of the Securicall AMS would also enhance the value of the property, thus providing a financial benefit to the Property Management Company or Client. In many applications this service can replace a 24-hour manned service based on site – giving additional savings.
