

IP CCTV

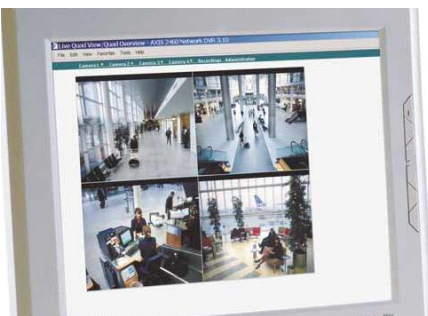

IP Security solutions from Securicall Systems

SECURICALL bring together years of experience in the Security Solutions market and a full understanding of data networking, SECURICALL has developed a highly effective solutions model. SECURICALL can provide an integrated solution and services suite for the intelligent management of high-capacity buildings. Intelligence can be seamlessly woven into the way buildings operate, to create intuitive, closely monitored, high security environments. The SECURICALL portfolio of Building Solutions products and services ranges from simple CCTV systems to sophisticated end-to-end systems and their on-going support.

Product overview

SECURICALL's IP CCTV system provides a state-of-the art surveillance solution designed to operate over data networks, including wireless solutions. Utilising an existing network and the Internet as the delivery mechanism, IP CCTV provides the streaming of video images, which can be configured as live or compressed images depending on the network bandwidth available. IP CCTV cameras can be viewed over the Internet using a standard web browser. In addition, our solutions can be configured to provide remote alarm messaging, where video cameras can detect and send text messages to mobiles/pagers or e-mail video clips of intruders.

Typical implementations

IP CCTV is suitable for both internal and external installation, and for use locally and remotely. Increasingly replacing traditional hard-wired CCTV systems, IP CCTV has been deployed for a

wide range of organisations including financial and legal companies, retail stores, petrol stations, car parks, educational establishments and government buildings.

Key features & benefits

Accessibility

IP CCTV delivers secure, real-time images of an incident or emergency that can be viewed remotely over a secure internet connection, or from a desktop PC in the building itself.

Scalability

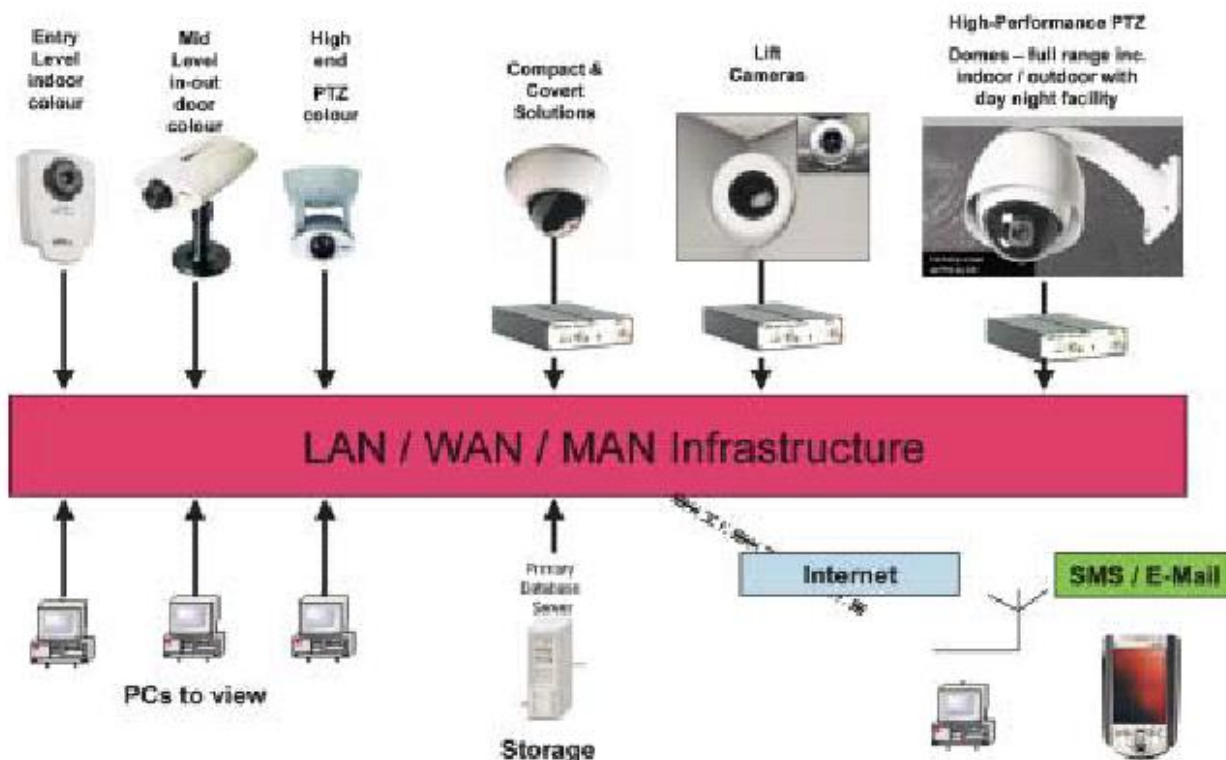

All SECURICALL IP CCTV designs are eminently scalable from entry-level stand-alone systems to fully integrated multiple building enterprise solutions.

Feature-rich

IP CCTV offers a wide range of functionality including auto time and data stamps, motion detection, visual transfer and alarm messaging.

Industry-standard products

SECURICALL works with a number of the world's leading IP CCTV manufacturers to ensure open architecture, high quality, high performance solutions, which are tailored specifically to meet the precise needs of individual clients.

Ongoing support

All SECURICALL's IP CCTV systems are fully supported by the company's dedicated engineering and service teams who have extensive experience in both IP CCTV and data networking.

Return on investment

Many companies will already have much of the infrastructure in place to support IP CCTV, including an IP network and broadband connectivity, thus helping to make IP CCTV a realistic and affordable solution.

With a commitment to deliver high-value security solutions, the smart design approach adopted by SECURICALL reduces capital expenditure and on-going service costs.

Why Securicall?

Securicall is a market leader in the provisioning of security solutions operating over conventional and data networks. With unique understanding in this arena, Securicall delivers elegant, end-to-end fully integrated solutions with guaranteed performance - and quick return on investment.

Based from our Regional Offices, Securicall can provide planning, design, installation and support to organisations across the UK.
